### Lab Practical #12:

To develop network using distance vector routing protocol and link state routing protocol.

### Practical Assignment #12:

#### 1. C/Java Program: Distance Vector Routing Algorithm using Bellman Ford's Algorithm.

```
2. // Java Program to implement
3. // Bellman For Algorithm
4. import java.util.Arrays;
5.
6. // Bellman For Algorithm
7. public class BellmanFord {
8.     // Graph is Created Using Edge Class
9.     static class Edge {
10.         int source, destination, weight;
11.
12.         Edge() {
13.             source = destination = weight = 0;
14.         }
15.     }
16.
17.     int V, E;
18.     Edge edge[];
19.
20.     // Constructor to initialize the graph
21.     BellmanFord(int v, int e) {
22.         V = v;
23.         E = e;
24.         edge = new Edge[e];
25.         for (int i = 0; i < e; ++i)
26.             edge[i] = new Edge();
27.     }
28.
29.     // Bellman-Ford Algorithm to find shortest paths from source to all vertices
30.     void BellmanFordAlgo(BellmanFord graph, int source) {
31.         int V = graph.V, E = graph.E;
32.         int dist[] = new int[V];
33.
34.         // Step 1: Initialize distances from source to all other vertices as
35.         INFINITE
36.         Arrays.fill(dist, Integer.MAX_VALUE);
37.         dist[source] = 0;
```

```
38. // Step 2: Relax all edges |V| - 1 times.
39. for (int i = 1; i < V; ++i) {
40.     for (int j = 0; j < E; ++j) {
41.         int u = graph.edge[j].source;
42.         int v = graph.edge[j].destination;
43.         int weight = graph.edge[j].weight;
44.         if (dist[u] != Integer.MAX_VALUE && dist[u] + weight < dist[v])
45.             dist[v] = dist[u] + weight;
46.     }
47. }
48.
49. // Step 3: Check for negative-weight cycles
50. for (int j = 0; j < E; ++j) {
51.     int u = graph.edge[j].source;
52.     int v = graph.edge[j].destination;
53.     int weight = graph.edge[j].weight;
54.     if (dist[u] != Integer.MAX_VALUE && dist[u] + weight < dist[v]) {
55.         System.out.println("Graph contains negative weight cycle");
56.         return;
57.     }
58. }
59.
60. // Print distances from source to all vertices
61. printDistances(dist, V);
62. }
63.
64. // Print distances from source to all vertices
65. void printDistances(int dist[], int V) {
66.     System.out.println("Vertex Distance from Source:");
67.     for (int i = 0; i < V; ++i)
68.         System.out.println(i + "\t\t" + dist[i]);
69. }
70.
71. // Main method to test the Bellman-Ford algorithm
72. public static void main(String[] args) {
73.     int V = 5;
74.     int E = 8;
75.     BellmanFord graph = new BellmanFord(V, E);
76.
77.     // Define edges
78.     // Edge 0-1
79.     graph.edge[0].source = 0;
80.     graph.edge[0].destination = 1;
81.     graph.edge[0].weight = -1;
82.
83.     // Edge 0-2
```

Date: 19/ 9/24

```
84.     graph.edge[1].source = 0;
85.     graph.edge[1].destination = 2;
86.     graph.edge[1].weight = 4;
87.
